Inspection Panel Chairman Gonzalo Castro de la Mata and Panel Member Jan Mattsson joined representatives of other Independent Accountability Mechanisms in meetings with the Chinese government and banking representatives on November 21 and 22 in Beijing to discuss the issue of accountability. They met on November 21 with officials of the Ministry of Finance and the Department of International Economic and Financial Cooperation to talk about the experience of the accountability mechanisms in ensuring adherence to environmental and social policies and providing redress to affected communities in the context of international investments by multilateral development banks and overseas investments by Chinese banks. On November 22, they took part in a one-day workshop with Chinese banks with substantial overseas investments in the context of the country’s One Belt, One Road Initiative to discuss adherence to highest environmental and social standards and the establishment of redress mechanisms. The workshop was organized by the China Banking Regulatory Commission, China Banking Association, the Green Finance Committee of the China Society for Finance and Banking, and the Greenovation Hub. In his presentation to the workshop, Mr. Castro de la Mata explained the Panel’s history, mandate and procedures and discussed the importance of adhering to social and environmental rules, and the business cost of not doing so. While in Beijing, the IAM representatives also met with Jin Liqun, president of the Asian Infrastructure Investment Bank, to discuss accountability in the multilateral context.

Joining the two Panel members at the meetings were Osvaldo Gratacos, vice president, Compliance Advisor Ombudsman, and Dingding Tang, chair of the Asian Development Bank’s Compliance Review Panel.
About Greenovation Hub

Greenovation Hub is an environmental Think-Do organization with a global outlook. We promote the development and implementation of sound climate and environmental friendly policies through conducting in-depth analysis and research, and fostering dialogues among stakeholders, in order to drive China’s green transition towards a sustainable, equitable and climate resilient future, contributing to the reduction of global ecological footprint.
